
Unit – 3 : Session – 8 : SLO – 2 | Round Robin with Different Time Quanta — Numerical Question

Burst times (all arrive at 0): P1 = 8, P2 = 7, P3 = 2, P4 = 4

1. SJF order: P3, P4, P2, P1. Completion times 2, 6, 13, 21, so the average turnaround time = $(2 + 6 + 13 + 21) / 4 = 10.50$ ms.
2. RR (quantum 4): P1 0-4, P2 4-8, P3 8-10, P4 10-14, P1 14-18, P2 18-21. Completion times P1 = 18, P2 = 21, P3 = 10, P4 = 14, so the average turnaround time = $(18 + 21 + 10 + 14) / 4 = 15.75$ ms.
3. Difference = $15.75 - 10.50 = 5.25$ ms. Answer: B. 5.25
