

Unit – 2 : Session – 2 : SLO – 1 | Data Types and Variables

Activity (Solutions)

1. Output of BoolTest:
2. b is false
3. b is true
4. This is executed.
5. 10 > 9 is true
6. (The second if(b) with b=false prints nothing.)
7. Static vs instance variable: A STATIC variable belongs to the class — one shared copy for all objects, created at class loading, accessed as ClassName.var. An INSTANCE variable belongs to each object — every object gets its own copy, created with new, accessed via the object reference. Changing a static variable affects all objects; changing an instance variable affects only that object.
