
Unit – 1 : Session – 7 : SLO – 1 | File and Device Management — Word Puzzle

I. Words Found in the Puzzle

1. BUFFERING — storing data temporarily while it is transferred between devices.
2. CACHING — keeping copies of frequently used data in faster storage.
3. DMA — Direct Memory Access; lets devices transfer data without CPU involvement.
4. DEVICE MANAGEMENT — OS component controlling I/O devices via drivers.
5. FILE MANAGEMENT — creating, deleting, organizing files and directories.
6. KERNEL — core of the OS coordinating all these services.
7. SPOOLING — Simultaneous Peripheral Operations On-Line; queuing jobs for devices like printers.
8. USER — the entity on whose behalf these services run.

II. Key Components

1. File management: file creation/deletion, directory structure, access control, free-space tracking.
2. Device management: device drivers, buffering, caching, spooling, DMA-based transfers,
3. and a uniform I/O interface for applications.
