
Unit – 1 : Session – 8 : SLO – 2 | Types of Computing Environments — Unscramble

I. Unscrambled Words (Computing Environments)

1. TRADITIONAL — standalone PCs/workstations on a LAN with client-server services.
2. CLIENT-SERVER — clients request services; centralized servers respond.
3. PEER-TO-PEER (P2P) — every node acts as both client and server; no central server.
4. CLOUD COMPUTING — on-demand compute/storage over the internet (IaaS, PaaS, SaaS).
5. MOBILE — smartphones/tablets with resource-constrained, touch-centric OSes (Android, iOS).
6. EMBEDDED — OS inside dedicated devices (cars, appliances, IoT); often real-time.
7. DISTRIBUTED — many networked computers cooperating to appear as one system.
8. REAL-TIME — strict timing deadlines; used in control systems.
