

Unit – 3 : Session – 4 : SLO – 2 | join(), sleep() and yield()

Worksheet (Answers)

1. Fill: The method SLEEP() is used to pause the current thread for a specific duration.
2. T/F: Calling join() makes the current thread wait until the other thread terminates. — TRUE
3. MCQ: True about yield() → C) It gives up the CPU voluntarily for other threads
4. Fill: The sleep() method throws INTERRUPTEDException if interrupted while sleeping.
5. Find the output: main prints immediately, child sleeps 100ms → B) Main done / Thread done
6. T/F: Calling yield() guarantees that the thread will lose the CPU. — FALSE (it is only a hint to the scheduler)
7. MCQ: Method that makes the current thread wait for another thread to finish → D) join()
8. Fill: The sleep() method is a STATIC method of the Thread class.
9. Identify the error: Thread.sleep(1000); without handling → B) Needs try-catch or throws clause
10. Fill: The join() method can be used to control the ORDER (execution sequence) of threads.
