
Unit – 2 : Session – 4 : SLO – 1 | Process Creation using fork() — Missing Code

Answers

```
TODO 1: pid = fork();
TODO 2: if (pid == 0)
TODO 3: printf("Child: PID = %d, Parent PID = %d\n", getpid(), getppid());
TODO 4: else if (pid > 0)
TODO 5: wpid = wait(&status);
TODO 6: printf("Parent: child %d finished, exit code = %d\n", wpid, WEXITSTATUS(status));
```

Completed program

```
#include <stdio.h>
#include <sys/types.h>
#include <unistd.h>
#include <sys/wait.h>

int main(void)
{
    pid_t pid, wpid;
    int status;

    pid = fork();                                /* TODO 1 */

    if (pid == 0)                                /* TODO 2 */
    {
        printf("Child: PID = %d, Parent PID = %d\n",
               getpid(), getppid());             /* TODO 3 */
        _exit(0);
    }

    else if (pid > 0)                             /* TODO 4 */
    {
        wpid = wait(&status);                     /* TODO 5 */
        printf("Parent: child %d finished, exit code = %d\n",
               wpid, WEXITSTATUS(status));        /* TODO 6 */
    }
    return 0;
}
```
