Name: PRANJAL SWARUP BHATNAGAR Reg. No.: RA2512703010007

Course: 21CSC202J - Operating Systems

Unit – 3 : Session – 16 : SLO – 1 | Deadlock Detection — Resource Allocation Table Check

Wait-for analysis

P1 holds R1, requests R2 (held by P2 and P3)

P2 holds R2, requests R1 (held by P1 and P3)

P3 holds R1 and R2, requests nothing -> P3 can run to completion

P3 finishes and releases (1, 1)

P1 gets R2 and finishes, releasing (1, 1); then P2 gets R1 and finishes

Answer

1. No deadlock. P1 and P2 wait briefly, but P3 is not waiting on anyone, so the
2. wait chain is broken once P3 releases. Completion order: P3 -> P1 -> P2.
