

Unit – 4 : Session – 5 : SLO – 2 | Logic Programming — Rule Evaluation

I. Query Evaluation

1. Given: likes(john, X) :- food(X). with facts food(pizza). food(burger).
2. Query: ?- likes(john, X).
3. Answer: X = pizza ; X = burger.
4. Explanation: the rule succeeds for every X that satisfies food(X). Prolog first unifies X with pizza; on asking for more solutions (;) it backtracks and returns burger. Both values satisfy the query.
