
Unit – 2 : Session – 2 : SLO – 1 | Process Schedulers — Action Cards

Match each action with its scheduler

- A. Moves process from ready queue to CPU for execution — Short-Term
- B. Removes processes from memory and puts them in suspended state — Medium-Term
- C. Selects which new processes to admit into the system — Long-Term
- D. Controls degree of multiprogramming by limiting entries — Long-Term
- E. Swaps suspended processes back to ready queue — Medium-Term
- F. Makes frequent scheduling decisions in milliseconds — Short-Term
- G. Deals with I/O-bound vs CPU-bound balance — Long-Term
