
Unit – 2 : Session – 8 : SLO – 1 | Implicit Threading — Crossword

I. ACROSS

3. AUTOMATIC — implicit threading: the compiler or runtime creates and manages the threads automatically.
4. PORTABILITY — code written with implicit threading runs on different systems and core counts without change.

II. DOWN

1. PARALLELISM — the aim: parallel execution of work on multiple cores.
2. RUNTIME — the runtime system (library) manages thread creation and scheduling.
5. OPENMP — compiler-directive based model for C/C++ (for example `#pragma omp parallel for`).
