

Unit – 2 : Session – 3 : SLO – 2 | Loops

Activity (Solution)

1. Completed code: `int i = 1; while (i <= 5) { System.out.println("Java Rocks " + i); i++; // step counter }`
2. Output: Java Rocks 1 / Java Rocks 2 / Java Rocks 3 / Java Rocks 4 / Java Rocks 5
3. Explanation: the while loop checks `i <= 5` before each iteration; the body prints the message with the current `i`, then `i++` increments the counter; when `i` becomes 6 the condition fails and the loop ends — exactly 5 iterations.
