
Unit – 3 : Session – 7 : SLO – 2 | SJF Numerical Problem — Online Compiler Case Study

Answers

1. Gantt chart (non-preemptive SJF): | J1 | J4 | J3 | J2 | with boundaries 0, 6, 7, 9, 13. J1 starts at 0 as the only job; at $t = 6$ the shortest waiting job runs first ($J4 = 1$, then $J3 = 2$, then $J2 = 4$).
2. J1: completion 6, turnaround 6, waiting 0. J2: completion 13, turnaround $13 - 1 = 12$, waiting $12 - 4 = 8$. J3: completion 9, turnaround $9 - 2 = 7$, waiting $7 - 2 = 5$. J4: completion 7, turnaround $7 - 3 = 4$, waiting $4 - 1 = 3$.
Average waiting time = $(0 + 8 + 5 + 3) / 4 = 4.0$; average turnaround time = $(6 + 12 + 7 + 4) / 4 = 7.25$
