
Unit – 1 : Session – 9 : SLO – 1 | Open Source Operating Systems — Rebuild the Message

I. Rebuilt Message

1. Choosing the letters for each cell rebuilds the sentence:
2. "LINUX IS A FREE AND OPEN SOURCE OPERATING SYSTEM."

II. Open Source Operating Systems — Definition and Examples

1. Open source OS: operating system whose source code is freely available to study, modify and
2. redistribute under an open license (GPL, BSD, Apache).
3. Examples: LINUX (Ubuntu, Fedora, Debian), FreeBSD, OpenBSD, Android (AOSP), ReactOS, MINIX.
4. Advantages: transparency, community support, no licence cost, customizability, security auditing.
